2.1.1. List operations

08:32

Write a Python program that implements a menu-driven interface for managing a list of integers. The program should have the following menu options:

1. Add

2. Remove

3. Display

4. Quit

The program should repeatedly prompt the user to enter a choice from the menu. Depending on the choice selected, the program should perform the following actions:

- **Add**: Prompts the user to enter an integer and add it to the integer list. If the input is not a valid integer, display "Invalid input".
- **Remove:** Prompts the user to enter an integer to remove from the list. If the integer is found in the list, remove it; otherwise, display "Element not found". If the list is empty, display "List is empty".
- **Display**: Displays the current list of integers. If the list is empty, display "List is empty".
- **Quit**: Exits the program.
- The program should handle invalid menu choices by displaying "Invalid choice".Ensure that the program continues to prompt the user until they choose to quit (option 4).

listOps.py

```
int_list = []

while True:
    print("1. Add")
    print("2. Remove")
    print("3. Display")
    print("4. Quit")

    choice = input("Enter choice: ")

    if choice == '1':  # Add
        value = input("Integer: ")
        try:
            num = int(value)
            int_list.append(num)
            print("List after adding:", int_list)
        except ValueError:
            print("Invalid input")

    elif choice == '2':  # Remove
        if not int_list:
            print("List is empty")
        else:
            value = input("Integer: ")
            try:
                num = int(value)
```

```
            if num in int_list:
                int_list.remove(num)
                print("List after removing:", int_list)
            else:
                print("Element not found")
        except ValueError:
            print("Invalid input")

    elif choice == '3':  # Display
        if not int_list:
            print("List is empty")
        else:
            print(int_list)

    elif choice == '4':  # Quit
        break

    else:
        print("Invalid choice")
```
