1.1.5. Multiplication Table

01:38

Write a Python program that takes an integer as input and prints the multiplication table for that integer from 1 to 10.

Input Format:

- The first line of input contains an integer that represents the number for which the multiplication table is to be printed.

Output Format:

- Print the multiplication table for the given number in the format:

<number> x <multiplier> = <result>

Note:

- The character "x" is used in the output to represent multiplication.
- Refer to the visible test-cases for more clarity.

```
n=int(input())
```

for i in range(1,11):

print(f"{n} x {i} = {n * i}")

multipl...

```
1 n=int(input())
2 for i in range(1,11):
3     print(f"{n} x {i} = {n * i}")
```
