### 1.2.1. Pass or Fail

01:11

Write a Python program that accepts the number of courses and the marks of a student in those courses.

The grade is determined based on the aggregate percentage:

- If the aggregate percentage is greater than 75, the grade is Distinction.
- If the aggregate percentage is greater than or equal to 60 but less than 75, the grade is First Division.
- If the aggregate percentage is greater than or equal to 50 but less than 60, the grade is Second Division.
- If the aggregate percentage is greater than or equal to 40 but less than 50, the grade is Third Division.

#### **Input Format:**

- The first input will be an integer , the number of courses.
- The second input will be integers representing the marks of the student in each of the courses, separated by a space.

#### **Output Format:**

If the student passes all courses:

- Print the aggregate percentage (formatted to two decimal places).
- Print the grade based on the aggregate percentage.

If the student fails any course (marks < 40 in any course), print:

- "Fail".

#### **Note:**

- Aggregate Percentage: Average performance across all courses, calculated by summing all marks and dividing by the number of courses.

```
# Input number of courses
n = int(input())

# Input marks
marks = list(map(int, input().split()))

# Check if any subject is failed
if any(mark < 40 for mark in marks):
    print("Fail")
else:
    # Calculate aggregate percentage
    aggregate = sum(marks) / n

    # Print aggregate percentage formatted to two decimal places
    print(f"Aggregate Percentage: {aggregate:.2f}")

# Determine grade
if aggregate > 75:
    grade = "Distinction"
elif 60 <= aggregate < 75:
    grade = "First Division"
elif 50 <= aggregate < 60:
    grade = "Second Division"
elif 40 <= aggregate < 50:
    grade = "Third Division"
```

```
print(f"Grade: {grade}")
```
