1.2.2. Fibonacci Series

32:17

Write a Python program that uses recursion to print the first terms of the Fibonacci series.

Input Format:

- A single integer representing the number of terms to generate.

Output Format:

- A single line containing the first terms of the Fibonacci sequence, separated by spaces.

```
def fibonacci(n):
    if n==1:
        return 0
    elif n==2:
        return 1
    else:
        return fibonacci(n-1) + fibonacci(n- 2)

n = int(input())
for i in range(1, n + 1):
    print(fibonacci(i), end=" ")
```

The screenshot displays a code execution environment with the following components:

- Performance Metrics:**
 - Average time: 0.011 s (10.75 ms)
 - Maximum time: 0.028 s (28.00 ms)
- Test Results Summary:**
 - 2 out of 2 shown test case(s) passed
 - 2 out of 2 hidden test case(s) passed
- Test Case Details:**
 - Test case 1 (4 ms):** Expected output: 5. Actual output: 5. Input sequence: 0 · 1 · 1 · 2 · 3 ·
 - Test case 2 (3 ms):** Expected output: 15. Actual output: 15. Input sequence: 0 · 1 · 1 · 2 · 3 · 5 · 8 · 13 · 21 · 34 · 55 · 89 · 144 · 233 · 377 ·
- Interface Elements:**
 - Buttons for 'Debug' and 'Test cases' are visible.
 - A 'Terminal' tab is present at the bottom.
 - Navigation buttons at the bottom right include '< Prev', 'Reset', 'Submit', and 'Next >'.
