2.2.1. Linear search Technique

04:45

Write a program to check whether the given element is present or not in the array of elements using linear search.

Input format:

- The first line of input contains the array of integers which are separated by space
- The last line of input contains the key element to be searched

Output format:

- If the element is found, print the index.
- If the element is not found, print **Not found**.

Sample Test Case:

Input:

1 2 3 4 3 5 6

3

Output:

2

```
# Read input array  
arr = list(map(int, input().split()))
```

```
# Read key element  
key = int(input())
```

```
# Linear search  
found = False  
for i in range(len(arr)):  
    if arr[i] == key:  
        print(i)  
        found = True  
        break
```

```
# If not found
```

```
if not found:
```

```
    print("Not found")
```
